

TRONICSIL

DRY DETERGENT SPRAY FOR ELECTRONIC CONTACTS

Characteristics

Base: Rapid evaporation solvent
Density: 0,76 g/cm³
Superficial Tension: 20 dine/cm
Dielectric const: 2,4
Specific Electric resistivity: $>1 \times 10^{13} \Omega \cdot \text{cm}$ (Ohm·cm)
Propellant: Denatured and odourless hydrocarbon.
CFC free
To be used on not in tension plant

Application

Electronic industry, photographic, optic and mechanic of precision industry.

Properties:

- It is a detergent cleaner for electronic contacts
- It evaporates quickly without leaving oily residues
- It has got a high wetting power

Description

It is used to clean electronic parts and delicate materials in general: gyroscopes, engines, instruments of precision, films, machines for the office, cameras, hi-fi, electronic cards, electric frames.

TRONICSIL is a detergent cleaner for electronic contacts, circuits, electric components.

Thanks to its formulation it evaporates quickly without leaving oily residues on the treated parts.

Thanks to its high wetting power, it spreads quickly and in a uniform way on the surfaces to be treated.

Chemically stable, pure, dielectric, high resistivity, low density, it wedges under the dirt removing it.

It avoids the appearance of short circuits into the electric frames.

In textile field, it is used to clean electronic parts like Bartack machines and sensors of embroidery machines.

The little tube permits to reach even the most difficult parts, the precision jet permits to remove the dirt,

It does not indent plastic materials or rubber.

Instructions of use

Insert the little tube and spray at short intervals on the surfaces to be treated.

Remove the dirt with a dry cloth

Packaging

Spray Aerosol ml 200

Box 25 Aerosol

Product Code 11510/02

Head office and Production
